

WSW

Dear readers, dear business partners,

in our current newsletter we will be telling you about the expansion of our heat treatment capacities in our in-house production and in external production.

Today in focus on page 2:

We wish you a happy Christmas and all the best for the New Year.
Yours Schulte-Wiese Gesenkschmiede

WSW

WSW - In-house heat treatment and contract work

At the beginning of 2018 we had the opportunity to put our in-house heat treatment back into operation after a fairly long standstill. Meanwhile we have already increased our staffing capacity and carried out various modernisations and optimisations to the plant so that since Q3 we have been in a position to subject many current articles to in-house heat treatment in a three shift system. Furthermore additional technical measures and investments in the heat treatment system are being planned. In addition we have recently started offering contract work. We have just acquired a local forging company as a new customer. Possible types of heat treatment include the quenching and tempering, annealing and normalising of components in alloys customary to forging and up to 1,000 mm in length and with a maximum pallet weight of 100kg.

The quenching process in our continuous feed system is carried out exclusively with environmentally friendly polymers.

Please ask us.

WSW

Our employees

Sergej Kirsch, 40 years old and working in production planning and the control section.

"I have been on board since July 2018 and since then have enjoyed going to work every day. At WSW we all pull together because that's the only way to help and support each other easily. As the saying goes "we are only strong if we work together" and that is really true."

Did you know...,

that the German Forging Association **Industrieverband Massivumformung e.V.** has a comprehensive book on offer for a wide audience - an introduction to forging technology? In his book "Massivumformung kurz und bündig" "A Concise Introduction to Forging" the interested reader will find a 150-page introduction to forging technology – from its historical development, the fundamentals of forging metals and finally the product development and the career opportunities in this sector. Furthermore the book can be downloaded in PDF-format from our **website**. Moreover WSW is a member of the association and active in the committees for technology and development as well as for PR work.

Today in focus

HTS BB s.r.o. in the Slovakian district of Vlkanová, was founded in the year 2007 as a thermal and chemical heat treatment provider. We see ourselves as a service-oriented provider of a wide spectrum of common heat treatment procedures.

In order to complete technical examinations we have a properly equipped analysis laboratory where well-trained staff carry out qualified tests.

Only recently we extended our capacities, adding two units in the multi-purpose furnace section and one in the tempering furnaces section. So since October this year we have had 10 multi-purpose furnaces at our disposal, each with a batch weight of approximately 1,000kg and corresponding tempering capability.

In the course of this expansion the nitriding capacity was also increased by an additional unit (batch weight approx. 2,500 kg). For the above-mentioned extension of the nitriding capacity we installed a new alcohol washing machine.

If you have any questions or are interested in a quotation please ask us.

The company

Founded:	2007
In Prange Group since:	2008
Turnover:	4,75 Mio. Euro
Employees:	62
Certification:	ISO 9001:2008 ISO TS 16949:2009
Website:	<input type="checkbox"/> htsbb.eu

Core competences

- Case-hardening
- Carbonitriding
- Nitriding
- Nitro-carburising (with and without oxidation)
- Quenching and tempering
- Annealing
- Sub zero treatment
- Sandblasting
- Straightening
- Alcohol washing
