

Dear readers and business partners,

last year we announced that we would be investing in a new automated band saw system. We are pleased to be able to tell you that, after further optimisation of the system the new JAESPA Compact 3 S is now up and running and we consider this an important step into the future. The new saw replaced two existing band saws and together with our hydraulic shears forms the core element of our cutting operations and the new unit offers several major benefits – more of that later.

Regards, Schulte-Wiese Gesenkschmiede

WSW – new band saw system comes on stream

In the past few days the time arrived for our new band saw system to go on stream. It has a feeding facility and an automated separating system for sorting the cut starting material and waste material. The band saw system is controlled by a Siemens S 7-1500 system. This investment has led to

numerous advantages for WSW. By transferring the starting material from the hydraulic shears onto the new saw it is no longer necessary to warm the material using gas during the cold months of the year. This not only reduces energy costs but also protects the environment. Furthermore the likelihood of waste occurring is minimised where previously cutting was necessary followed by vertical compression of the material during the subsequent forging process. This is because the cutting surface of the sawn parts is far cleaner. In addition our capacity is increased so that now 100% of the starting material can be cut on the premises. Thanks to automation colleagues can now take on more tasks in other areas and help to further reduce lead times. In the coming weeks we will further optimise the process. In addition various saw bands with a longer service life will be tested, and there is also an option for network connections.

Our staff

Philipp-André Klever, head of sales, has been part of our team for 3 years.

“As a sales person I am the interface between our customers and our company. Our sales team’s objective is to support our customers with application-specific solutions for their projects and to support them in all phases of the project. Particularly over the last couple of years we have opened up internationally and been able to enter new markets. I really

enjoy the contact to our customers and to my colleagues in my daily work.”

Did you know...?

The staff structure in our company is characterised by long term service from our personnel. On average our employees work for us for 15 years; on the departmental level we have achieved a minimum of 13 years.

We are proud of the fact that some of our staff, who have been working with us for decades, started their careers with us as apprentices or trainees. Thus we have a balanced age structure of 45 years of age on average. Moreover this year we have again given young people the chance to train for interesting and varied jobs as toolmakers and as industrial clerks. We present ourselves on different portals as an attractive employer and work regionally and closely with, for example karriere-suedwestfalen.de , where, apart from our website, we continually give information [interesting vacancies](#) .
